## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 003	<b>TYPE OF FIRE:</b> Wildfire

### INPUTS

**WEATHER SUMMARY:** \*\*\*\*\*Instability Moving Into Area\*\*\*\*\*

Day: Sunny, Max. Temps: 90-93 degrees, Min. RH: 15-20%, AM Winds: West 5-8 until 1000.  
Afternoon Winds: West, Southwest 15-20mph with gust up to 25mph

Night: Min. Temps: 64-68 degrees, Max. RH: 30-35% upper slopes, 45-50% valleys, Winds Ridge:  
West 8-12mph Winds Down Canyon: 10-15mph after 2000.

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

Fire is burning in mostly heavy down fuels and Oak litter. Light flashy fuels are extremely receptive and complete consumption is occurring. FDFM is 3% for 1 hr and 4% for 10 hr fuels. LFM is roughly 60%. The potential for rollout in steep terrain is high into a continuous grass crop. Expect rapid rates of spread where wind/topography align. Head Fire ROS in excess of 80-150+chains/hr. Grass became very active at winds exceeding 10 mph. Spotting ½ to 1 mile. As wind increases in the afternoon established lines will be tested and any spot fire outside of control lines will require heavy mitigation.

Probability of Ignition: 89%.

##### SPECIFIC:

Div. A & D: Little fire activity expected. Interior smoldering predominately in Oak litter. Rollout possible in steep areas.

Div M & Q: Aligned afternoon/evening winds will test control lines. Possible slope reversal in Enos Creek drainage will present challenges with forecast winds. Rolling burning material can ignite fuel below crews and make significant runs up hill.

Div T, W & X: Little fire activity expected. Interior smoldering predominately in Oak litter. Rollout possible in steep areas.

##### AIR OPERATIONS:

Interior burning may require air support. Drops may cause burning material to roll into unburned fuel.

### SAFETY

- The fire area is predominantly light flashy fuels and is a common denominators of tragedy fires
- Do not let a lack of active burning diminish situational awareness
- Look for areas where rollout can effect you or your crew

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

## INCIDENT MANAGEMENT TEAM

### WATER USAGE PLAN

#### *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

#### **Fireline personnel-** (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

#### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

#### **Aviation Operations-**

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

#### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

#### **Public/Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

#### **Management and Supervision-**

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.

**Demobilization Plan**  
**CA-LNU-005465**  
**July 7<sup>th</sup>, 2014**

Supervisory personnel are to identify resources excess to the needs of the incident at the earliest opportunity. If possible, this should be done within 36 hours in advance of a proposed release by filling out a General Message Form (ICS 213) or Declaration of Excess Resource Sheet. Please include name, request number, date, ETD, ETA, and if available for reassignment. By definition, surplus personnel are available for release if they have met the 2:1 work rest requirements, have rested for a minimum of 8 hours.

Section Chiefs will approve all excess resource lists and the lists will be forwarded to the Resources Unit for processing. Operational resource excess lists shall be prepared by the Planning Section and approved by the Planning Section Chief.

The release priorities are:

- Local Government
- OES
- Hired Equipment
- Cooperating Agencies
- Federal Resources
- CAL FIRE Resources

The needs of the incident and off-incident issues may necessitate the modification of these priorities in certain cases.

Information concerning surplus resources will be forwarded to the Lake-Napa Unit expanded dispatch by the Demobilization Unit (with ECC Support Team at incident). This information will include the resource name, request number, ETD, and ETA. Additionally, the availability of the resource for a new assignment will be provided.

A. All government vehicles and hired equipment must be safety inspected prior to release. Safety inspections shall be coordinated with the Ground Support Unit Leader. All deficiencies will be corrected prior to departure for home unless agency head signs a waiver of inspection.

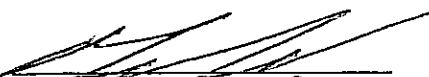

Surplus resources lists will be posted within the ICP and at the Demobilization Unit with a schedule for resources to pick up the checkout form (ICS-221) at the Demobilization Unit and begin the checkout process. Finance will be the final stop prior to returning to the Demobilization Unit. All resources must complete the demobilization process. Once the ICS-221 has been completed and returned in to the Demobilization Unit, the resource will be released from the incident to home, re-assigned to another incident, or held as directed by Northern Region Operations Center (North-Ops).

All Resources will meet any agency-specific and/or DMV rest requirements before demobilizing from the incident. The operator must be rested prior to driving. A resource encountering a delay enroute will contact the appropriate home unit or incident.
